

Task 1 - Data Cleaning and Preprocessing

Objective

The objective of this task was to clean and preprocess a raw dataset to improve its quality, consistency, and usability for analysis.

Dataset

Marketing Campaign Dataset

Tool Used

- Microsoft Excel

Data Cleaning Steps

- Checked the dataset for missing values.
- Handled missing values where necessary.
- Checked for duplicate records and removed them if found.
- Renamed column headers using lowercase letters and underscores.
- Standardized text values by removing extra spaces and ensuring consistency.
- Converted the **Dt_Customer** column to a consistent **DD-MM-YYYY** date format.
- Verified that numeric and date columns had the correct data types.
- Saved the cleaned dataset as a new Excel file.

Files Included

- `marketing_campaign.csv` - Original dataset
- `cleaned_marketing_campaign.xlsx` - Cleaned dataset
- `README.md` - Project documentation

Outcome

The dataset was successfully cleaned and prepared for further data analysis. The preprocessing steps improved data consistency, removed quality issues, and ensured the dataset was ready for future analytical tasks.
